### Abstract of EP 0776740 (A1)

The conveyor arrangement (8), driven in the opposite direction to the transportation unit, is located in the area of the product fall line. The conveyor is located in the product fall line in such a way that one area exclusively, especially the area (13a) of the falling down product (13) lying forward in the transporting direction, is covered by the conveyor.

The conveyor is a belt conveyor, especially as a knife edge belt conveyor. Its upper surface is slightly inclined in relation to the transporting face of the transporting unit.
